- GRIT Step 4: Adding to Strengths

Pg. 34: Module 5:
- GRIT Resources
- Referring to Mental Health
- GRIT Step 5: Reviewing, Summarizing, Discussing Action Steps, Giving Resources
- Self-Care

Pg. 42: Appendices
Welcome to the GRIT Coach Program. GRIT stands for Greater Resilience Intervention Team and has been established to train volunteers in the community to promote wellness and resilience among fellow community members – friends, family, and acquaintances – in the wake of the stress caused by COVID-19 (Coronavirus).

Due to the impact of the stresses of COVID-19 on individuals, families, and communities, the current pandemic can be viewed as a disaster for the community, the country, and the world. In times of disaster, strengthening coping, spreading support, and providing resources can have a positive impact on healing and resilience for everyone.

As a GRIT Coach, you can help strengthen resilience and spread this support to people you know in your community.

GRIT Coaching Model

GRIT was established by Dr. Charles Benight and his team at the UCCS National Institute for Human Resilience to promote strength and empowerment.

Your training will enable you to provide direct support to your loved ones, your neighbors, and friends. Some of you will be in more professional roles (e.g., nurses, schoolteachers, physical therapists, etc.) where this approach might also be extremely helpful. In these cases, you can use these skills with colleagues as well as clients/patients/students.
We will most likely find a need for this type of support continuing past the time that we are all sheltering in place; thus, be prepared to be a resource for several months as things slowly move back to normalcy.

As a GRIT Resilience Support Coach, you will have skills that you can use in future major (or even minor) events that may affect our community. Look for more trainings that we will offer in the future, as well as excellent trainings by other non-profit organizations such as the Red Cross (see https://www.redcross.org/take-a-class/disaster-training).

**Self-Reflection:** Why did you sign up to become a GRIT Coach?

---

**Self-Reflection:** What are you hoping to get out of the GRIT Coach Program?

---

**What is a GRIT Resilience Support “Coach”?**

A GRIT Resilience Support Coach’s role is to support and motivate another person who may be struggling with the COVID-19 pandemic (or other disaster). This role is similar to other coaches you are already familiar with, such as a sports coach or a life coach.

In the sports world, when athletes struggle to improve a skill or hone their overall performance, they turn to a coach. In comparison, if they are injured, they turn to a medical professional. In this similar mindset, GRIT Resilience Support Coaches provide education and support at an individual, group, and community level and are not medical or mental health professionals.

**Self-Reflection:** What types of qualities make up a good coach?

---

GRIT Coaches provide short-term resilience support through effective listening, offering social support, strengthening individual coping strengths, and providing resources and referrals. Ultimately, they provide hope during a challenging time.

**GRIT Coaches never replace professional help!**

**Who to Help**

GRIT Coaches focus on helping friends and acquaintances local to them. They focus on identifying individuals and groups who might be especially in need of coping support during times of disaster, like the COVID-19 coronavirus pandemic. There is no clear list of individuals in need, and Coaches should use their own judgment and knowledge of their friends and acquaintances, to think about who to reach out to.

However, it is important to consider the following indicators of possible need:

- Someone seems especially withdrawn from others and seems to be isolating more than is necessary given the virus situation (e.g., not linking with anyone virtually)
- An individual is showing signs of stress such as appearing down, being unusually irritable, crying, or just seeming out of sorts
- A person is not sleeping or seems really exhausted
- Someone is working in a high stress/impact job (first responder, health care worker, small business owner)
- An individual is already coping with an existing mental health problem, like depression, PTSD, alcohol or drug use, or schizophrenia
- Someone who was already under significant stress (such as a chronic illness or financial difficulty) or going through a difficult life transition (such as job change, divorce, death in the family, etc.)
- Someone who is a single parent who is trying to manage having children at home and figure out financial situation with the stay-at-home requirement

**Self-Reflection:** Who in your life could benefit from a conversation from a GRIT Coach?
Self-Reflection: What skills, talents, and abilities do you feel you have that make you a natural helper?

The GRIT Coaching Course

This course provides information on:

- General stress, disaster and trauma-related stress, and COVID-19 stress reactions
- Resilience, disaster recovery, and coping skills and support.

It offers training in a brief conversational intervention that can be used by a GRIT Coach to support effective coping by friends, family members, neighbors, co-workers, and other acquaintances. It is intended to function as one element within more comprehensive planning to help individuals and communities to be as resilient as they can be in the wake of the COVID-19 outbreak or other disasters.

It provides a rich set of technology-based tools for you to refer people to in helping them manage things, including:

- My Resilience Internet tool for managing COVID (and other disaster) stress
- Relaxation and mindfulness phone apps
- Health & Fitness phone apps

Goals of GRIT Coaching Course

- Gain a basic understanding of resilience, common stress reactions in disasters, and stress-related problems
- Learn how to support and listen to someone who may be struggling with the pandemic experience or other disaster
- Understand how to help build strength and resilience within individuals and families, and throughout the community
- Learn how to promote effective coping skills, sense of self-efficacy (confidence in ability to cope), and resilience
• Learn when referral for formal mental health counseling might be needed, and how and where to refer

• Learn about available community resources, and how to guide individuals to more resources when needed.

**The GRIT Coaching Concept**

Social support is a major factor in effective coping and resilience to adversity. A helping conversation is one good way of offering social support.

Goals of the GRID Coach helping conversation include:

• Encouraging the person to talk about how they are coping with the stresses

• Drawing attention to and identifying what is working for them, their strengths

• Reviewing key activities that can make coping even more effective

• Sharing helpful community resources

• Sharing technology-based resources

• Encouraging active coping
5 Steps to GRIT Coaching

The 5 Steps provide a guide to conducting a supportive helping conversation to support others. You can use these 5 steps to guide and structure your helping conversations:

1. Make Contact
2. Ask Questions
3. Identify Coping Strengths and Resilience
4. Add to Strengths
5. Review, Summarize, Discuss Action Steps, Give Resources

GRIT Coach Roles and Expectations

- To undertake initial training
- To practice and master the skills of holding supportive conversations
- To maintain ethical behavior and keep confidence and privacy
- To be knowledgeable about resources in the community
- To actively encourage others to participate in education and awareness programs directed toward physical and emotional fitness
- To abide by the spirit of a GRIT Coaching and promote resiliency throughout the community.

Ethics of GRIT Coaching

Confidentiality

- Effective connection and support often rely heavily on a sense of trust between individuals in the conversation
• You may hear sensitive information from the speaker, or information the speaker would not want shared

• Keep in mind that you may be contacting friends, family, colleagues, and people you know in your community

• The strength of these relationships can depend greatly on you being able to keep the speaker’s confidence and trust

• Do not share any personal information from your GRIT Coach conversations with others

• Try to have conversations in private locations when possible, to avoid being overheard.

**Self-Reflection:** Have you experienced a time when your trust was compromised? What did that feel like?

---

**Range of Support**

Remember that you will be acting as a Coach, and **never** as a mental health or medical professional. GRIT Coaching is an additional source of coping support, along with more traditional forms of help such as mental health treatment.

You may provide support, validate experiences, discuss coping, and share resources, but avoid giving any counseling or medical advice.

**Knowledge of Resources**

We will provide you with a set of resources that you can access and share. You will need to familiarize yourself with these resources so you can answer questions about them. More generally, it will be important and helpful to be knowledgeable about local resources in your community.

• 211 is a great resource that can be accessed 24/7 and provides information about local resources and services

• Also, the Colorado Crisis Services at 1-844-493-TALK (8255) or text TALK to 38255 to speak to a trained professional is a wonderful resource and is available 24/7.
Self-Reflection: What types of resources are available in your own community? Do you know how to access them?

Practice of Skills

Take time to practice the skills you learn in this program!

Sit down with a family member or friend (remember you can connect virtually!) to practice the questions and conversations you may have with others. It’s also helpful to practice the coping skills yourself (it will make you more resilient!!), that you will discuss with friends and family, so you can share your own experiences with others. Try out the various resources yourself (especially online systems), in order to benefit from them. This will help you talk with friends and family about the resources.

Self-Reflection: When practicing these skills, who will you be able to practice with? Will it be in-person or over technology?

Reporting

After your GRIT Coach training is complete, you will be sent a survey weekly through email. The survey will inquire about the number and type of contacts you had in the week, as well as the following questions:

- What were your successes as a Coach this week?
- What were your main concerns as a Coach this week?
- What areas of strength and positive functioning and well-being did you discuss? How useful were these areas of focus?
- If you provided a referral or resource, what type of referral did you provide? How often did you provide these referrals?
- How confident did you feel in utilizing the skills you learned in the GRIT Coach training?
Making contact
Explaining your role
Listening
Asking questions
Discussing strengths
Adding to strengths
Providing technology-based referrals
Providing referrals to community resources
Providing referrals to mental health treatment
Reviewing and summarizing conversation
Agreeing on action steps

- Did you find that being a GRIT Resilience Support Coach helped in your own coping this week?
- How stressful was it for you to be a GRIT coach this week?
- Have you recommended to others to become a GRIT Coach?
- Do you have any questions regarding GRIT Coaching?

This information will assist us in evaluating the success and trends of the GRIT Coach Program.

**Core Principles of Psychological First Aid**

In this training you will learn about making contact and holding a conversation to promote strength, resilience, and effective coping. Our approach is based on core principles of Psychological First Aid. As you talk to friends, family, and acquaintances, and follow the 5 Steps of GRIT helping conversations, be thinking about promoting the following in the individuals you are supporting:

- Personal sense of safety
- Physical and mental calming
- Connectedness with other people
- Hope for the future
- Sense of self- and collective efficacy, confidence in ability to cope effectively with the disaster
Promote a Sense of Safety

Disasters, including COVID-19, threaten the lives and livelihood of individuals and communities. As the numbers continue to rise throughout the world, so too is the sense of personal threat and vulnerability. This is especially true for individuals who may have underlying health conditions, are immune compromised, are 60 years or older, have been around those confirmed as infected, and those who have loved ones that match those descriptions as well.

The pandemic has also severely affected the employment of millions of people, whether that be lost work hours or total job loss. These factors can combine to a threatened sense of personal and financial safety.

An additional complication with COVID-19 is the lingering unknown. Individuals do not know when the infection rate will reach its peak, nor when that rate will slow and eventually fall. Stress reactions tend to persist when the sense of threat or danger continues and is ambiguous or unpredictable.

Individuals will feel safer if they know how to practice personal safety behaviors (e.g., social distancing), get social support from others, find and use helpful resources, feel themselves to be coping effectively, and experience positive emotions.

Check out the Northeastern University COVID-19 Safety Module for more!
https://www.northeastern.edu/covid-19-how-to-be-safe-and-resilient/

Self-Reflection: What are some ways you are practicing safety in your own home?

Promote Calming

Stress may increase physical tension as well as increasing anxiety and emotional distress, so having a heightened state of awareness and tension is normal during the pandemic or in the immediate aftermath of a conventional disaster. It is helpful for those experiencing tension to calm themselves physically and mentally. Calming techniques can be used to ease the effect of stress and anxiety.
GRIT Coaches can discuss ways that individuals can calm themselves, especially by sharing apps or other resources that can help with calming. These apps include Calm, Headspace, and Happify.

Being able to calm yourself is an important component of resilience!

**Self-Reflection:** What are some ways you calm or relax yourself now?

---

**Calming via Normalization of Experience**

It is important for us all to recognize that initial strong emotional responses during and immediately following a traumatic event or disaster are common and are not usually considered a sign of a serious mental health problem. With support, access to resources, and the passage of time, most people will return to a sense of normalcy once the event has passed.

Indeed, this is the major focus of the GRIT Program: to provide resilience support to those in need. Some people may be hard on themselves and interpret their stress reaction as a negative reflection on themselves (“I’m crazy”, “I’m weak”, “I shouldn’t feel this way”, “I’m better than this”, etc.). Such thoughts can lead to or worsen anxiety and distress.

Remind others that they are going through a stressful time and that it is common and expected to feel distress.

**Promote Connectedness**

Social support has been shown to be related to better emotional wellbeing and recovery following trauma and disaster. Social connections also help in communication, information-sharing, problem-solving, and attaining resources after a disaster.

It is therefore important to maintain or develop levels of social connectedness during a pandemic or following a disaster.

During the pandemic when we may be advised not to connect face-to-face, we can use our technologies to keep our social connectedness!
Self-Reflection: What are ways you have stayed connected in the past several months?

Promote Hope

Hope is believing the future will be better and things will work out.

Hope can seem like a small thing, but studies show those who maintain optimism in times of stress are more likely to have positive outcomes!

After trauma, a sense of hopelessness may set in for many people. The good news is that as a whole, humans are resilient, and time and time again come together as a community to rebuild, re-engage, and push forward from disasters. We will, and are, doing this with the pandemic.

Promote Sense of Self- and Collective Efficacy

Self-efficacy centers around an individual’s belief in their ability to handle the stress and threats that the disaster (pandemic) is causing. A strong sense of coping self-efficacy provides a person with a sense of control over the situation, which is fundamental to resilience.

Individual self-efficacy is developed through:

1. Effectively handling difficult challenges (i.e., mastery)
2. Seeing others, like a friend or family member, effectively handling stressors
3. Receiving support from a friend or love one who encourages “you can do this!”
4. Effectively managing one’s physical or emotional distress
**Module 2: Self-Efficacy, Stress, and Making Contact**

**Explain your role and use questions to explore how others are feeling and provide support**

**Goals Today**

- Learn about disaster and traumatic stress
- Learn about COVID-19-specific stressors
- Learn about developing self-efficacy and resilience
- Start GRIT Coach steps!: Making Contact and Asking Questions

**Stressors**

A stressor is any event or condition that causes a person to adapt or change in significant ways.

In response to the event, stressors have many sources and include any situation in life requiring a significant change or adaptation. We can have a stress response to an actual acute challenge, or to perceived or imagined (i.e., psychological) threats.

As humans, we can stress about events or situations that have not yet happened or about something that is not even true. The physiological and emotional response to these psychological threats is similar to an actual physical threat.

**Stress Reactions**

Stress reactions are the mind and body’s reactions to an unusual demand such as a threat or challenge.

Whether this demand is real or imagined, outside the body or within, the body will respond in a characteristic way known as the Stress Response.

When the brain interprets something as a stressor, it sends alarm signals via nerves and hormones to prepare the body to “fight, flight, or freeze.” Consequently, senses become more alert; muscles tighten and tense for action, heart and breathing rates increase so that more blood is provided for vital organs.
When stress is chronic, these physical affects can cause or worsen a range of health problems, including hypertension, autoimmune problems, chronic body aches and pains, menstrual problems, indigestion or stomach upset, headaches, insomnia, and frequent illnesses.

Stress can change many aspects of our thinking, emotions, and actions:

<table>
<thead>
<tr>
<th>Cognitive</th>
<th>Poor concentration, forgetfulness, difficulty making decisions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Emotional</td>
<td>Anxiety, grief, irritability, anger, nervousness, withdrawal, depression, feeling overwhelmed</td>
</tr>
<tr>
<td>Behavioral</td>
<td>Changes in eating habits, increased smoking, greater consumption of alcohol or prescribed and/or illicit drugs, increased accident proneness, and changes in sexual libido</td>
</tr>
</tbody>
</table>

**Disaster and Traumatic Stress**

Some stressful events are considered traumatic in intensity. These are typically events that threaten the life, health, or safety of an individual, either directly or indirectly. Traumatic events can include natural and human-caused disasters, physical and sexual assaults, war, child abuse, and life-threatening illness. Distress and symptoms following exposure to such an extreme event may be more severe or persistent than general stress reactions.

Disasters are events that challenge individual capacity for adaptation, which can lead to the onset of a range of mental health outcomes, from minimal and manageable to severe psychological distress and/or impairment that may last for weeks or years after the event.

**Self-Reflection:** What are other examples of disasters your community has experienced in the past 10 years?
Coronavirus vs. Conventional Disasters
Both kinds of disaster can produce:

- Threat to the safety and wellbeing of oneself and loved ones
  Loss of community

- Loss of access to normal activities of daily life

Unlike most natural disasters, the pandemic creates a sense of ongoing threat.

In conventional disasters, help is usually offered “post-disaster.” With COVID-19, help must be offered while the disaster is still ongoing. Ongoing threat can create a sense of continuing dread that can pervade the community of those exposed.

The coronavirus is affecting everyone, unlike most disasters that are confined to specific areas. There are no safe zones during the pandemic, except at home alone. In the pandemic, health care workers are especially affected, and there is an important need to mobilize support services for them.

Because of the risk of infection and need for social distancing, face-to-face disaster response services and face-to-face mental health counseling are largely not available (PFA, counseling) in a pandemic. The physical isolation required by coronavirus interferes with social connections and support, which are important coping tools.

Self-Reflection: Have there been times in the past several months when you have struggled with the social isolation?

The unfamiliar and invisible nature of the virus threat makes it more difficult to cope with. The destruction and dramatic impact of a natural disasters are usually very clear, such as when an earthquake or fire claims lives and property in an acute phase, after which the majority of the shock is finished. By contrast, the traumatic aspect of technological disasters may be less acute and involve learning of, versus witnessing of an event, with this happening over an extended time period, often with substantial delays.

Frightening information is received in doses, in fragments and contradictory ways. In the pandemic, there is overwhelming media coverage that can increase anxiety rather than reduce it. With the virus, people worry about different things (e.g., fears of having symptoms, health anxiety) than in natural disasters.
Self-Reflection: Have you found news coverage of the COVID-19 outbreak helpful or harmful? In what ways?

Virus-Specific Stressors

There are a number of kinds of experience in the pandemic that can be especially stressful for those unfortunate enough to have them.

For those who have become infected:

- Feeling afraid of dying
- Anxiety about passing the infection to their families
- Separation from family and need to social distance from them
- Children worried about sick parents
- Exposure to ethnic stigma (e.g., hostility to Chinese-Americans)

For those in specific situations:

- Witnessing and caring for individuals who are severely ill
- Loss of a loved one or friend

Many people will experience cascades of losses and psychological stress above and beyond the fear-provoking consequences of the disease itself:

- Financial stress (food and resource insecurity)
- Loss or interruption of employment and structured activity
- Loss of access to pleasurable activities
- Loss of access to social contacts

Actions needed to stay safe - social distancing – can increase stress by reducing access to normal routines, enjoyable activities, and social supports.
Stresses of Health Care Work during COVID-19

Some health care personnel have often experienced especially great levels of stress, due to the following kinds of experiences that might be troubling them:

- Physical and mental exhaustion
- Torment of making difficult decisions about who will receive care
- Pain of losing patients and colleagues
- Infection risk of catching a disease with a potentially lethal outcome (perceived life threat)
- Separation from family and need to social distance from them
- Anxiety about passing the infection to their families
- Limited access to personal protective equipment (PPE) and needed supplies
- When becoming infected, sudden role reversal from a care provider to a patient may create great adjustment challenges, frustration, and feelings of helplessness

Developing Self-Efficacy

Think about Marathon runners. Marathoners did not put on their shoes the first day of training and run 26.2 miles!

They started with what they could accomplish that day. Maybe it was three miles, maybe one, or maybe it was a walk around the block. Then when the three miles/one mile/walk felt achievable, the distance was increased, bit by bit, until the runner could run 26.2 miles (mastery experience)!

In learning how to run a marathon, the runner also learned how to breathe effectively and regulate emotions.

Then, when they run the race, they run with others who are also demonstrating the ability to run a marathon (vicarious experience) and there are people on the sidelines cheering them on (social persuasion).

Finally, the runner takes into account their own physical and emotional state: do they have achy knees, pre-run jitters?

Taking all of this is account, the runner runs a marathon!

For the COVID-19 crisis, you can also see how having a strong sense of coping self-efficacy would be helpful in being resilient. Just like the marathoner, setting achievable goals in your daily life reinforces a sense of mastery as you accomplish them.
These goals can be quite domestic such as “I set a goal today to walk around the block. And I felt so much better after I did it!” Or, “I set a goal to help the kids with their homework after I finished my work. Being clear about the goal helped me to be more intentional with them and made me feel really good when I accomplished this goal.” These types of experiences increase a person’s sense of personal control which is fundamental to successful coping and resilience.

**Self-Reflection:** Think of times in your life when you have overcome a challenge. What was that process like for you? What got you through it?

---

**Trauma-Related Self-Efficacy**

Trauma-related self-efficacy focuses on how an individual feels about their personal ability to cope and come through the trauma:

- To regulate their emotions during and following a traumatic experience
- To solve problems related to the disaster
- To maintain relationships and social networks
- To fulfill trauma-related tasks (e.g., possibly relocating, obtaining a new job, or restoring property)

For many in the COVID-19 crisis, there may be specific stressors that people are having to manage related to the virus. We want to encourage individuals to focus on what aspect of these stressors they have some control over and to focus on their ability to handle these.

Some people are struggling more because they are focusing on what they cannot control (e.g., whether the economy is really going to be bad for a long time, or, whether the deaths from the virus will keep going up). Instead, if we can have people focus on doing what helps keep themselves safe (physical distancing), healthy (eating well and exercise), and emotionally connected to others, their coping self-efficacy will strengthen.
**Collective Self-Efficacy**

Collective self-efficacy is the group or community’s belief in the ability to respond to a challenge or stressor. For example, following the Waldo Canyon Fire, the community reacted very positively as a group and offered support to each other and the first responders.

Collectively, the perception is that the community has “what it takes” to manage a major disaster. Sentiments such as **“This community doesn’t quit!”** are very helpful to promote overall collective resilience.

This is what we are hoping the GRIT Support Coaches will help to instill in our community in response to the COVID-19 pandemic.

**Self-Reflection:** Have you sensed any collective efficacy in your community in the wake of COVID-19? How so?

---

**What is Resilience?**

Being resilient does not mean that an individual is never stressed, or that stress or trauma does not affect him or her. Rather, it is the ability to quickly return to a “pre-trauma” or “pre-stress” state. Individuals high in resilience can essentially “bounce back” from a hardship, setback, or obstacle. The more this rebound occurs, the more resilient the individual becomes to future hardships.

The experience of adversity alone does not create resilience; it is the experience of successful coping that is important. Resilience is based on effective utilization of resources, flexible coping, active management of personal distress, and ability to seek opportunities to help others.

**The ability to respond to setbacks, paired with strong perceptions of self-efficacy and positive self-worth, promotes and maintains masterful resilience.**
Resilient People...

**Skills for Making Contact: Introducing What You Would Like to Do and Explaining your Role**

1. Initiate contact and begin your helping conversation in a respectful, non-intrusive way.

2. You can introduce the fact that you have trained as a GRIT Coach and describe your role if you feel it may help the conversation.

3. Ask for permission to talk to him/her about the pandemic and explain that you are there to see if you can be of help.
Try to ensure privacy for the conversation. Give the person your full attention. Speak softly and calmly.

Here are things you can say to start up a helping conversation (you can say something like this, using your own words):

- “As a GRIT Coach, I’m volunteering to check in with people I know to see how they’re doing with the stress of the pandemic (or other disaster)”
- You have been on my mind and I wanted to see how things are going for you amidst the current stress?
- “Is it okay if I talk to you about that for a few minutes?”

Do not assume that people will respond to your outreach with immediate positive reactions.

If an individual declines your offer of help, respect his/her decision and indicate when and where to contact you later if wanted.

**Self-Reflection:** How would you initiate a conversation with a friend? A family member? A neighbor?

---

**Giving Support**

Support predicts wellbeing after exposure to stressful events. When people feel supported, they are likely to feel less alone, safer, more confident in a positive future, and more confident in their ability to cope.

Giving support often means just listening, showing interest, and “being there” for the person. It happens when you bring up the stressful situation in a supportive way. It might include sharing your own experience when it seems to support or validate what the person is saying.

*It doesn’t mean solving problems for the person or giving them advice.*

It can be a real challenge to support others while maintaining social distancing:

- Phone or video support
- Talking while maintaining social distancing of 6 feet
Some Do’s and Don’ts

When people we care about are in pain or feeling upset, it is sometimes hard to know how to support them.

Here are some Do’s and Don’ts to keep in mind when others are sharing thoughts and feelings:

<table>
<thead>
<tr>
<th>Don’t</th>
<th>Do</th>
</tr>
</thead>
<tbody>
<tr>
<td>Try to solve or fix someone else’s thoughts or feelings</td>
<td>Just listen and offer support</td>
</tr>
<tr>
<td>Change the subject when someone begins sharing feelings</td>
<td>Make time for others to talk</td>
</tr>
<tr>
<td>Demand that others talk when they don’t want to</td>
<td>Support others’ feelings</td>
</tr>
<tr>
<td>Criticize the other person’s experience</td>
<td>Tolerate your own anxieties, fears, and worries</td>
</tr>
<tr>
<td>Try to distract someone away from sharing feelings</td>
<td>Share your own concerns and feelings</td>
</tr>
<tr>
<td>Attack or punish someone for having feelings</td>
<td></td>
</tr>
</tbody>
</table>

It sounds silly but having some basic statements that let the other person know that it’s okay to talk and feel the way they do is important. You can use your own words, but here are some examples:

…”That sounds really hard (scary, awful, painful, etc.)”

…”I sometimes feel that way too”

…”Is there anything I can do to help?”

…”Uh-huh.....Mmmm....Oh... (in other words, JUST LISTEN!)”
Encouraging People to Talk

Nonverbal behavior can confirm, deny, strengthen or control what is being said. In a virtual environment (e.g., over zoom or facetime) this is a bit harder. But head nodding to show you are getting what the person is saying will help.

Be aware of how much you are talking versus listening. Give opportunity to talk for the individual you are trying to help. Remember, you cannot overestimate the power of truly listening. Effective listening is an emotional “Advil” or pain reliever.

In making contact, we are promoting connectedness.

Assignment: Review of Resources

Check out the following resources to start to familiarize yourself with possible resources

- My Resilience Website
  
  [https://resilience.vast.uccs.edu](https://resilience.vast.uccs.edu)

- GRIT Website
  - [www.grit.uccs.edu](http://www.grit.uccs.edu)
Module 3: Identifying Coping Strengths and Resilience

Look for strengths and ask about what is working for you? What are you doing to cope that is helping?

Goals Today

- Continue GRIT Coach steps!: Asking questions and identifying coping strengths and resilience

5 Steps to GRIT

1. Make Contact
2. Ask Questions
3. Identify Coping Strengths and Resilience
4. Add to Strengths
5. Review, Summarize, Discuss Action Steps, Give Resources

Open-Ended and Closed-Ended Questions

Two types of questions are open and closed questions.

- Closed questions elicit only a yes or no or a short response (“Are you feeling stressed out because of the virus?”). Phrases that generally begin a closed question include: “Do you, can you, would you, will you, is it?”

- To elicit more informative answers and encourage your person to talk, you may need to try open questions using phrases such as:

  “How do you feel about...?”

  “Help me understand...”

  “Tell me about...”
Asking “Why” questions can often get the typical response of “I don’t know” or “Because.” The use of why questions can connote an interrogation or judgmental style of questioning; use why questions carefully.

Asking too many questions or asking irrelevant questions can cause confusion for the person.

**Important Open-Ended Questions for Coaches to Ask**

To get the conversation started, and learn how the pandemic (or other disaster) is affecting the person, ask two or three of the following questions:

- “How are you doing?”
- “What is happening for you?”
- “What is most distressing for you?”
- “How are you handling it emotionally?”
- “What have you been doing lately that helps you relax or provides you some enjoyment?” (this question will help you move into the next Step)

**Self-Reflection:** Write down one closed-ended and one open-ended question in your own words.

As your conversation flows from these questions, listen, support, and encourage resilient behaviors: Social connections and support, positive (mood-improving) activities, healthy eating and drinking, sleeping, exercise, relaxation.

**Time to Practice!**

Roleplay asking both open and closed ended questions. Pay attention to how the other person responds to each

Remember you can use technology to roleplay!
Checking for Receptiveness to Support

Pay attention to how receptive the other individual in a conversation is. Signs that someone is not receptive to the conversation are:

- Minimal eye contact
- Turning away from speaker
- Easily distracted
- Frequent nodding of the head and/or frequent “ok” or “yeah”
- Seeming irritated by your offer of help

Check in with the listener if you feel like they are not being receptive to the conversation.

Self-Reflection: What are ways you can tell that someone is engaged in a conversation? What would you look for in a virtual conversation?

In asking questions, we are promoting connectedness.

Coping Strengths and Resilience

Why We’re Asking about Strengths and What is Helping

Remember, coping self-efficacy centers around an individual’s belief in one’s ability to manage important stressors or challenges and increases sense of control over the situation and the future.

Sometimes we have to be reminded of the things we have already overcome and the things we are already doing to cope and work through our immediate difficulties.
Noticing Strengths can Increase Resilience

Developing and utilizing coping skills adds to a sense of resilience. Resilience is based on effective utilization of resources, flexible coping, active management of personal distress, and ability to seek opportunities to help others.

You can help individuals notice these things in themselves by checking in about what current actions and supports are working for them or have worked in the past.

Key Questions for Coaches to Ask about Strengths

After finding out, generally, how people are being affected and feeling, move into asking about what is helping or working for them, their strengths.

Here are questions you can ask. Choose two or three to ask the person:

- “What are you doing that is helping you cope?”
- “What parts of your life feel good to you?”
- “Are there times when you have felt positive emotions or good feelings during this pandemic?”
- “Have you been able to offer support to anyone who is struggling?”
- “Who has been especially helpful to you in getting through this?”
- “In your past, what difficult experience were you able to overcome?”

Look for Opportunities to Expand Discussion about Their Strengths

Ask open-ended questions to have them say more about the positive things:

- “How is that helping you?”
- “Can you tell me more about that?”
- “What exactly did you do when you were able to overcome that difficult experience in the past?”

Your goal is to listen, support, and encourage resilient behaviors: Social connections and support, positive (mood-improving) activities, healthy eating and drinking, sleeping, exercise, relaxation. We will expand on this in the next module.
When we identify strengths and resilience and have people focus on these, we are promoting a sense of control, safety, hope, and self-efficacy.

Assignment: Continue Review of Resources

- 211: www.211.org
- You State’s Crisis Resources
- Colorado: www.coloradocrisisservices.org
Module 4: Adding to Strengths

Review key coping actions and look for opportunities to add to the strengths of the person

Goals Today

- Continue GRIT Coach steps!: Adding to Strengths

5 Steps to GRIT

Adding to Strengths

As the person speaks about the concerns, and then their strengths, you have been looking to find opportunities to encourage their resilient behaviors:

- Social connections and support
- Positive (mood-improving) activities
- Healthy eating and drinking
- Sleeping
- Exercise
- Relaxation

Now, gradually move the conversation into a brief review of several key coping actions that are important to most people’s recovery and resilience during a difficult time.
**Self-Reflection:** It’s important that we walk the walk. How are you encouraging these resilient behaviors in yourself? Are there areas you want to focus more on?

---

**Introduce the Topic**

Introduce the topic; tell them you would like to quickly ask about some key things.

- “I would like to quickly check in with you about some key actions that help many people get through this difficult time”

Tie this into your previous discussion of strengths if possible. For example, if they said they are skyping or phoning their friends or family several times a week as a way to cope, you can say “For example, social support and connection is very, very important, and you’ve been doing a lot to focus on that.”

**Questions for Coaches to Ask to Review Key Coping Actions**

- “What are you doing each week to stay connected with friends and family and give and get support from others?”
  - If needed, explore ways of increasing connection and social support (Appendix B)

- “What are you doing each week to include positive activities and activities you enjoy that might make you feel better inside yourself (lift your mood)?”
  - If needed, explore positive activities to lift mood (Appendix C)

- “What are you doing to keep your mind and body relaxed?”
  - If needed, discuss tools for calming body and mind (Appendix D)

- “What are you doing to help your sleep?”
  - If needed, discuss sleep hygiene (Appendix E)

- “Are you getting physical exercise each week?”
  - If needed, discuss how to increase exercise (Appendix F)

- “What are you doing to make sure you are eating well and limiting your use of substances?”
  - If needed, discuss eating or drinking habits (Appendix G)
When we identify strengths and resilience and have individuals recognize these, we are promoting a sense of calming and self-efficacy. See the Appendixes for resources on each of these coping actions.

Time to Practice!

Roleplay asking about strengths, then adding to them.

Remember you can use technology to roleplay!
Module 5: Resources, Referral, and Action Steps

Based on your conversation, provide 211 resources, discuss option of referral for counseling if needed, and review and summarize discussion and action steps moving forward

Goals Today

- Continue GRIT Coach steps!: Review, Summarize, Discuss Action Steps, Give Resources and important closing remarks.

5 Steps to GRIT

1. Make Contact
2. Ask Questions
3. Identify Coping Strengths and Resilience
4. Add to Strengths
5. Review, Summarize, Discuss Action Steps, Give Resources

Overview of GRIT Resources

- 211 Resources for practical assistance
- My Resilience
- GRIT website
- Apps
- General Mental Health Referrals
**211 Resources for Practical Assistance**

211 is an organization dedicated to proving information for local resources and services. 211 is available throughout the country to provide expert, caring help, including food and nutrition programs, shelter and housing options, utilities assistance, emergency information, disaster relief, employment and education resources, services for veterans and ex-offenders, health care information, support for individuals with mental health concerns, and assistance for substance use and interpersonal violence.

- You can call 2-1-1 anytime to speak with a live, trained service professional to learn about national and local resources.
- Or go to 211.org for a list of national resources, including information on COVID-19, emergency and crisis resources, disaster assistance, and resources for essential needs.

**GRIT Website**

The GRIT website is provided through the UCCS National Institute for Human Resilience and offers useful tip and information sheets for a variety of different groups (e.g., Veterans, first responders, families, community, medical staff/healthcare workers). There are also interesting resilience-based video “casts”- 30 Keys to GRIT.

- [www.grit.uccs.edu](http://www.grit.uccs.edu)

**My Resilience Internet Course**

The My Resilience Web support system is an interactive website (resilience.vast.uccs.edu) with 6 modules in it to help people manage traumatic disaster situations and promote self-efficacy.

The modules are:
1. Self-talk: being your own best advocate;
2. Seeking Social Support;
3. Managing Trauma Triggers/Memories;
4. Relaxation/Calming;
5. Unhelpful Ways of Coping;

This system was found to significantly reduce worry and depression in a randomized trial with Hurricane Ike survivors. This system is provided through the UCCS National Institute for Human Resilience.

[https://resilience.vast.uccs.edu](https://resilience.vast.uccs.edu)
Apps

For Relaxation/Calming/Sleep

- Calm (free with in app purchases): [https://www.calm.com/](https://www.calm.com/)
- Happify (free with in app purchases): [https://www.happify.com/](https://www.happify.com/)
- Insight Timer (free with in app purchases): [https://www.insighttimer.com](https://www.insighttimer.com)

For Resilience

For Eating

For Exercise

- FitOn (phone app) – Free (and paid options) at-home fitness workouts including HIIT, Barre, Yoga, strength, and body weight
- Barre3 (website) – 15 days of free barre fitness workouts
- Also, many fitness-oriented classes on YouTube for free

When we share resources, we are promoting a sense of safety, calming, connectedness, hope and self-efficacy. All five key elements of Psychological First Aid!

Self-Reflection: Do you have experience with any of the apps listed? What was that experience like? Are there any apps not listed that you like using?
When to Refer for Formal Mental Health Support

While many responses to stress are normal, when these responses begin resulting in inability to adequately or safely perform an individual’s daily activities, he/she may benefit from speaking to a mental health professional.

Signs that someone may require professional help include:

- Feeling sad or depressed for what seems like “all the time”
- Feeling anxious or having distressing thoughts for what seems like “all the time”
- Feeling like they are having a “panic attack”
- Having continuing difficulty working or meeting daily responsibilities
- Significant increase in use of alcohol or street drugs, or using them to cope
- Inappropriate use of prescription medications
- Thinking about hurting/killing themselves or someone else

Suicide Risk

It is possible you will speak to someone who may be experiencing thoughts of suicide.

Suicide risk can increase with stress, especially when combined with a negative and tumultuous economy (such as loss of jobs, inability to pay bills).

It can feel intimidating, stressful, and even scary to talk with someone who may be experiencing suicidal thoughts. If the speaker discusses or mentions wanting to harm themselves or others, you can call a crisis hotline for guidance. If a threat feels imminent, call 911.

National Suicide Prevention Lifeline: 1-800-273-8255
How to Refer to Professional Mental Health

Ask if the person has considered seeking professional counseling to help address the problem. Share your thoughts about why it might be something to consider. Enquire if they would like assistance in locating counseling and share resources for locating counseling if appropriate:

- 211
- My Resilience Website
- Specific referral information to Colorado Crisis line: Colorado Crisis Services at 1-844-493-TALK (8255) or text TALK to 38255 to speak to a trained professional.

What Happens in Mental Health Treatment?

(see My Resilience website module: Seeking Professional Help)

Mental health professionals undergo a variety of education and training to provide the treatments for common problems like depression, anxiety, and problem drinking or drug use.

When someone begins mental health treatments, they typically start with an intake, or a longer session in which a mental health professional asks about presenting concerns and history. Then, the client and therapist create a treatment plan together, stating what goals the client would like to focus on and what steps can be taken during treatment. The client will then typically meet with the therapist once a week, bi-weekly, or monthly to work on those goals.

Review, Summarize, Agree on Action Steps

Actions steps include:

- Continuing activities that have already been helping
- Adding additional actions based on review of key coping activities
- Adding use of tools for coping (apps, Internet programs, websites, telephone support service)
Review and Summarize

Summarize key points of your conversation:

- How the pandemic (or other disaster) is affecting them
- What they are doing to cope that is helping
- What added actions they can take to further strengthen their coping

Check on their reaction to what you have summarized using the following questions (in your own words):

- “Have I got that right?”
- “Is there anything else important that I’m forgetting, or you’d like to add?”

Agree on Action Steps

Say the following using your own words:

- “We discussed ways you are effectively coping, especially (add individual strengths in coping actions here) and how you can keep doing or increase what is working for you”
- “We also talked about things you can add to your toolbox to strengthen your own resilience (add elements here based on your assessment and previous discussion)”
- “Do those things make sense to do in the next days and weeks?”
- “What action steps do you see as most important to you?”

Time to Practice!

Roleplay reviewing a conversation and agreeing on action steps.

Remember you can use technology to roleplay!
Time to Practice!

Put it all together and role play a conversation.

Introduce GRIT training, use closed and open-ended questions and ask about strengths, add to those strengths, then review and agree on steps to take!

Remember you can use technology to roleplay!

Remember the 5 Steps to GRIT

1. Make Contact
2. Ask Questions
3. Identify Coping Strengths and Resilience
4. Add to Strengths
5. Review, Summarize, Discuss Action Steps, Give Resources

GRIT Coaching and Self-Care

Assess your own reactions to the pandemic (or other disaster). Practice the same self-care actions we recommend to others.

Personal checklist:

- Are we maintaining important social connections and giving and getting social support?
- Are we doing positive (mood-improving) activities each week, in ways that are consistent with social distancing?
- Are we practicing healthy eating and drinking?
- Are we maintaining health sleep patterns?
- Are we getting regular exercise?
- Are we finding ways to relax regularly?
Walking the walk enables us to speak from experience and models good self-care.

Self-Reflection: How do you engage in self-care?

Maintaining Boundaries and Avoiding Becoming a “Treatment” Provider

It is essential that you maintain the role of “Coach” and not as a counselor with your people you reach out to. Remember the athletic analogy: Motivation is handled by coach, injuries by the doctor.

Dealing with Problems and Questions

It is expected that people will have problems and questions that you may not have an answer for. You can always email us questions and concerns at grit@uccs.edu and let them know you will get back to them!
Appendix A

Quick Reference Guide

5 Steps to GRIT

1 Make Contact

Explain your Role

Introduce the fact that you have been training as a GRIT Coach and describe your role. Ask for permission to talk to him/her about the pandemic, and explain that you are there to see if you can be of help.

“As a GRIT Coach, I’m volunteering to check in with people I know to see how they’re doing with the stress of the pandemic (or other disaster). Is it okay if I talk to you about that for a few minutes?”

2 Ask Questions to Understand Person

How are you doing?
What is happening for you?
What is most distressing for you?
How are you handling it emotionally?
What have you been doing lately that helps you feel more confident?
What have you been doing lately that helps you feel relaxed or provides you some enjoyment?

While asking questions and responding to conversation, listen, support, and encourage resilient behaviors: Social connections and support, positive (mood-improving) activities, healthy eating and drinking, sleeping, exercise, relaxation

3 Identify Coping Strengths and Resilience

What are you doing that is helping you cope or feel a sense of mastery?
What parts of your life feel good to you?
Are there times when you have felt positive emotions or good feelings during this pandemic?
Have you been able to offer support to anyone else who is struggling?
Who has been especially helpful to you in getting through this?

Look for Opportunities to Expand Discussion about Their Strengths

How is that helping you?
Can you tell me more about that?
What have you done in the past that has helped you overcome difficult times?

Listen, support, and encourage resilient behaviors: Social connections and support, positive (mood-improving) activities, healthy eating and drinking, sleeping, exercise, relaxation

4 Add to Strengths

Gradually move the conversation into a brief review of several key coping actions that are important to most people’s recovery and resilience during a difficult time

Questions to Review Key Coping Actions

I would like to quickly check in with you about X key actions that help many people get through this difficult time

What are you doing each week to stay connected with friends and family and give and get support from others?
   If needed, explore ways of increasing connection and social support (Appendix B)

What are you doing each week to include positive activities and activities you enjoy that might make you feel better inside yourself (lift your mood)?
   If needed, explore positive activities to lift mood (Appendix C)

How much stress are you feeling physically and emotionally?
   If needed, discuss tools for calming body and mind (Appendix D)

How are you sleeping?
   If needed, discuss sleep hygiene (Appendix E)

Are you getting physical exercise each week?
   If needed, discuss exercise (Appendix F)

How about your eating and drinking during this time?
   If needed, discuss eating and drinking (Appendix G)

5 Review, Summarize, Discuss Action Steps, Give Resources

Summarize Key Points of Your Conversation

How the pandemic (or other disaster) is affecting them
What they are doing to cope that is helping
What added actions they can take to further strengthen their coping
Agree on Action Steps

We discussed ways you are effectively coping, and about things you can add to your toolbox, including... (state key takeaways based on your previous discussion)

Do those things make sense to do in the next days and weeks?

What action steps do you see as most important to you?

Give and Discuss Recommended Resources

Give Resilience Resource handout (Appendix H)

211 Resources for practical assistance ([www.211.org](http://www.211.org))
GRIT website ([www.grit.uccs.edu](http://www.grit.uccs.edu))
My Resilience website ([https://resilience.vast.uccs.edu](https://resilience.vast.uccs.edu))
Apps
Appendix B

Ways of increasing connection and social support

Ways to connect virtually with friends and family:

- Facetime (Apple products)
- Video Call (Android products)
- SnapChat video Call
- Google Hangout
- Zoom
- Microsoft Teams

Other social connections

- YouTube Live classes
- Netflix party
- Facebook Watch Party
- Instagram live concerts

Activities to do virtually

- Book clubs
- Dinner or coffee “dates”
- Meditation, yoga, or other exercise groups
- Game night
- Movie night
- Museum, park, or zoo “tours”
Appendix C

Some Positive Activities to Lift Mood

- Play with a pet
- Exercise
- Sing
- Make art
- Journal
- Take a bath
- Have a date night
- Have a movie night with a friend
- Go for a safe walk
- Listen to music
- Find a new online magazine or newspaper to read
- Play cards
- Play a board game
- Meditate
- Repair things around the house
- Garden or take care of your plants
- Doodle
- Find a virtual church
- Connect with previous classmates
- Try embroidery or cross stitching
- Play a musical instruments
- Do arts and crafts
- Make a gift for someone
- Find music you used to love
- Cook or baking
- Read
- Join a virtual book club
- Go virtual sightseeing
- Do you hair or makeup
- Learn a dance
- Work on a puzzle
- Rearrange the furniture in your house
- Write down things you are grateful for
- Look at the stars
- Set goals for the next year, five years, and ten years
- Work on a hobby
Appendix D

Sleep Hygiene

Improving sleep hygiene (CDC and National Sleep Foundation recommendation)

- Be consistent in when you get ready for sleep and the time you want to wake up
- Make sure your bedroom is quiet, dark, relaxing, and at a comfortable temperature
- Remove electronic devices, such as TVs, computers, and smart phones, from the bedroom
- Limit daytime naps to 30 minutes
- Avoid large meals close to bedtime
- Steer clear of food that can be disruptive right before sleep
- Avoid stimulants such as caffeine and nicotine close to bedtime
- Exercise to promote good quality sleep
- Ensure adequate exposure to natural light
- Establish a regular relaxing bedtime routine
- Make sure that the sleep environment is pleasant
Appendix F

Exercise

10 Tips to Exercise Safety (Better Health Channel)

1. Be aware of your body

2. Warm up and cool down

3. Pace yourself

4. Mix it up

5. Use straps or tape

6. Stay hydrated

7. Be weather aware

8. Focus on technique and quality over quantity

9. Check your gear

10. Be sensible

11. Abide by social distancing guidelines
Appendix G

Eating and Drinking Habits

Tips for healthy eating and drinking (Heart Foundation)

- Eat a variety of foods,
  - Vegetables
  - Wholegrains
  - Lean meats
  - Oily fish
  - Fruit
  - Low, reduced or no fat dairy
  - Vegetable and seed oils
- Incorporate plant-based foods
  - Make plant-based foods the main part of each meal
    - Vegetables
    - Wholegrains
    - Fruit
    - Nuts and seeds
- Choose healthier unsaturated fats instead of saturated and trans fats
  - Use spreads and margarines made from canola, sunflower or olive oil and dairy blends
  - Choose from a variety of vegetable and seed oils when you are preparing food
  - Use salad dressings and mayonnaise made from canola, sunflower, soybean, olive, sesame and peanut oils
  - Eat two to three serves of oily fish a week
  - Select lean meat and poultry
  - Try to limit processed meats (e.g. sausages) and deli meats
  - Try to limit take-away foods
- Choose reduced, low or no fat dairy foods or ‘calcium added’ non-dairy foods
- Limit salt and try to season with spices and herbs instead
- Limit sugary, fatty and salty snack foods
- Choose mainly water to drink
- Limit sugary drinks
- Drink coffee (regular or decaffeinated) and tea in moderation.
- Choose reduced, low or no fat milk
- Be aware of alcoholic beverages
Appendix H

GRIT Resiliency Support Coach Resource List

*If there is a resource need that is not listed, you can go to the 211 database here - http://211colorado.communityos.org/cms/home

GRIT Website
• grit.uccs.edu - Provided through the UCCS National Institute for Human Resilience and offers useful tip and information sheets for a variety of different groups (e.g., Veterans, first responders, families, community, medical staff/healthcare workers).

My Resilience Website
• resilience.vast.uccs.edu - Interactive website with 6 modules in it to help people manage traumatic disaster situations and promote self-efficacy. The modules are: 1) self-talk: being your own best advocate; 2) Seeking Social Support; 3) Managing Trauma Triggers/Memories; 4) Relaxation/Calming; 5) Unhelpful Ways of Coping; and 6) Seeking Professional Help.

Crisis Specific Resources

General
• http://211.org/ - National resource database for most needs (e.g., housing, MH/SA tx, medical care, financial assistance). Has COVID-19-specific resource page. Can also call 211.

Food
• Food assistance (website) – Food resources during the COVID-19 outbreak (https://www.hungerfreecolorado.org/covid-19/)
• Food access/distribution resources – Colorado Springs Food Rescue (http://www.coloradospringsfoodrescue.org/resources-covid19)

COVID-19 Specific
• Non-urgent COVID-19 questions (call center) – El Paso County Public Health call center (719) 575-8888 or Colorado Health Emergency Line for the Public (COHELP) (303) 389-1687

Youth Resources
- Children’s Hospital Colorado COVID-19 video for kids - https://youtu.be/vSsKQPqpS7A

Website and App Based Resources
Relaxation, Meditation, Sleep
- Calm (phone app and website) – Meditations, calming music/sounds, sleep stories. Mostly free, some paid content in-app.
- Headspace (phone app and website) – Meditations, sleep, and movement exercises. Free during the global crisis.
- Smiling Mind (phone app and website) – Meditations and mood tracking.
- Sattva (phone app) – Guided meditations and tracking.
- Sleep Cycle (phone app) – Sleep tracking, gentle alarms, sleep stories, snore tracking. Skip premium version to continue to free content.
- White Noise (phone app) – Noises to fall asleep to. Can record your own sleep sounds.
- Spotify (phone app and computer app) – Music content and a section devoted to podcast and content to help with sleep and relaxation.

Mood and Mental Health
- Moodpath (phone app) – Mental health app for depression and anxiety. Includes reflections on thoughts/emotions, psychological exercises, assessments, and mood tracking.
- SuperBetter (phone app and website) – Mental health tracker with goals and achievements.
- Happify (phone app and website) – Includes activities and games to increase happiness, such as countering negative thoughts or meditation. Includes progress tracking.
• Recovery Record (phone app) – Platform to support individuals with eating disorders – meal plan adherence, coping strategies, encouragement

**Fitness**
• FitOn (phone app) – Free (and paid options) at-home fitness workouts including HIIT, Barre, Yoga, strength, and body weight
• Barre3 (website) – 15 days of free barre fitness workouts

**General Wellbeing, Arts, Entertainment, and Culture**
• Brit & Co – Website with a focus on education and creativity for women – free and paid content/classes (watercolor classes, budget management classes, etc.)
• Pikes Peak Library District – register for free card online ([https://ppld.org/library-cards](https://ppld.org/library-cards)) and gain access to online content including ebook and eaudiobooks
• Goop Community Office Hours (Instagram) – Experts from Goop discussing covering different topics (anxiety, simple recipes, breathwork, etc.) ([https://www.instagram.com/goop/](https://www.instagram.com/goop/))
• Quarantine Culture (website) – A curated calendar of online events, free. ([https://quarantineculture.com/](https://quarantineculture.com/))
• Yo-Yo Ma’s Songs for Comfort (twitter stream) – Daily tweets with songs, free. ([https://mobile.twitter.com/YoYo_Ma](https://mobile.twitter.com/YoYo_Ma))
• Quarantine Book Club (website) – Join your favorite authors on Zoom where you can have discussions, free. ([https://www.quarantinebookclub.com/](https://www.quarantinebookclub.com/))
• Caveat (website) – A NYC event space hosting live shows for streaming, free. ([https://www.youtube.com/channel/UC3b57CBtNx-cXPRdldkst7g](https://www.youtube.com/channel/UC3b57CBtNx-cXPRdldkst7g))
• New York Times Crosswords (phone app or website) – Free and paid crossword puzzles from the New York Times

Podcasts

Positive / Wellness Podcasts:

- **The School of Greatness**: NYT bestselling author Lewis Howes interviews entrepreneurs, athletes, celebrities, and more to share inspiring stories on how to feel better, do better, and live a happier life.

- **PositivePsychology.com Podcast**: Hosts Hugo Alberts and Seph Fontane Pennock explore a variety of topics including listening to your emotions, passion, work, and money, humility, effortless being, positive CBT and finding focus amidst distraction

- **Positive University**: Positive inspiration and encouragement to help you overcome your challenges and make a greater impact! Hosted by bestselling author, Jon Gordon.

- **Happier with Gretchen Rubin**: The #1 bestselling author of The Happiness Project and Better Than Before gets more personal than ever as she brings her practical, manageable advice about happiness and good habits to this lively, thought-provoking podcast.

- **Wake Me Up**: Morning mindfulness, meditation, and motivation. Guided morning routines get you out of bed, calm your mind, and start your day in the best possible way. Episodes incorporate mindfulness, meditation, motivation, and other scientifically-supported methods for mental health and well-being.

Podcasts for Sleep

- **Sleepy**: Doze off to classic stories with Sleepy. Each week, baritone host Otis Gray reads old books in a low, rhythmic tone to lull you into a deep slumber so you can have a fresh start the next day.

- **Nothing Much Happens**: Yoga and meditation teacher Kathryn Nicolai reads bedtime stories where nothing much happens to help you relax and sleep peacefully. The stories are a soft landing spot for your mind.. Nicolai tells the story twice and go a bit slower the second time.

- **Guided Sleep Meditations: Tracks to Relax**: Guided sleep meditations that help people relax and fall asleep fast
Appendix J

Audiobooks available on Audible

The Happiness Hypothesis
- By: Jonathan Haidt, Narrated by: Ryan Vincent Anderson, Length: 10 hrs and 18 mins
  - This ambitious audiobook follows in the footsteps of best selling author Jonathan Haidt’s first book, The Righteous Man, to bring more ancient wisdom to the motivational book canon. Here, he studies individual ideas that have endured through centuries and permeated different cultures, examining the source of their staying power. Listeners are encouraged to find comfort in how blockers to happiness, though they may feel completely unique, have been universally felt by millions across times and cultures. With Haidt’s diligent, thoughtful examination brought to life by the skillful narration of Ryan Vincent Anderson, the listening experience is simultaneously like an enthralling lecture series and an excavation of the wisdom of past ages.

Living with a SEAL: 31 Days Training with the Toughest Man on the Plane
- By: Jesse Itzler, Narrated by: Jesse Itzler, Length: 5 hrs and 18 mins
  - You might think having a Navy SEAL as your roommate would bring about an attitude of stoicism—but when author-narrator Jesse Itzler invited Navy SEAL David Goggins to live with him, it instead caused a boatload of unexpected shenanigans. From Goggins’s scheduling a snowy run in the middle of the night to a series of unfortunate walk-ins, Itzler recounts his housemate’s antics in a way that brings some much-needed humor to the motivational genre. Along the winding road of Itzler’s month with a SEAL, expect joy, friendship, and a healthy dose of serious motivation. (After all, Goggins is also an ultramarathon runner, ultra-distance cyclist, and current world-record holder for most push-ups in 24 hours.) In the end, what he offers Itzler and listeners alike is a much-needed attitude adjustment: what we think we’re capable of is nowhere near our limit

Resilience: Hard-Won Wisdom for Living a Better Life
- By: Eric Greitens, Narrated by: Eric Greitens, Length: 10 hrs and 34 mins
  - In 2012, Eric Greitens unexpectedly heard from a former SEAL comrade, a brother-in-arms he hadn’t seen in a decade. Zach Walker had been one of the toughest of the tough. But ever since he returned home from war to his young family in a small logging town, he’d been struggling. Zach and Eric started writing and talking nearly every day, as Eric set down his thoughts on what it takes to build resilience in our lives. Eric’s letters drawing on both his own experience and wisdom from ancient and modern thinkers are now gathered and edited into this timeless guidebook. Resilience explains how we can build purpose, confront pain, practice compassion, develop a vocation, find a mentor, create happiness, and much more.
